The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect mine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to recombinantly produce (I), and be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 QVSALQTQQAELQAENQRLEAQSATLGQQ1QTLSSKIVARNESLKQQARSAQKSNAATSY 120

or 1812 anno acidas; irragenense or hyperimmune serum-reactive antigense comprising e.g., 76, 134, 221 or 576 anino acids; consisting of peptides comprising e.g., 76, 134, 221 or 576 anino acids; consisting of peptides comprising e.g., 76, 134, 221 or 576 anino acids; creactive antigen; a process for producing a cell that expresses a S. agalactiae hyperimmune serum reactive antigen; a pharmaceutical composition, especially a vaccine, comprising the hyperimmune serum-reactive antigen or nucleic acid molecule; an antibody that binds at least to a selective part of the hyperimmune serum-reactive antigen; a hyperimmune serum-reactive antigen; a mathody; an antagonist that binds to the hyperimmune serum-reactive antigen; a method for identifying an antagonist capable of binding to the hyperimmune serum-reactive antigen to its interaction activity of antagonist capable of reducing or inhibiting the interaction activity of a process for in vitro diagnosing a disease related to expression of the hyperimmune serum-reactive antigen to its interaction partner; a bacterial infection, especially a S. agalactiae infection. The hyperimmune serum reactive antigen is useful for isolating, purifying and or interaction partner of the hyperimmune serum reactive antigen is useful for the manufacture of a cand or identifying an interaction partner of the hyperimmune serum reactive antigen to the hyperimmune serum reactive antigen or antigen is useful for the manufacture of a cid molecule is useful for the manufacture of a cid molecule, hyperimmune serum reactive antisene nucleic acid comprising aptamers or spiegelmers. The nucleic acid molecule is useful for the manufacture of a cid molecule, hyperimmune serum reactive antisene nucleic acid solation acid solation or antibody is useful for the manufacture of a cid molecule, hyperimmune serum reactive antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen antisen an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an isolated nucleic acid molecule encoding a hyperimmune serum reactive antigen or its fragment. Also described are: a vector comprising the nucleic acid molecule; a host cell comprising the vector; a hyperimmune serum-reactive antigen comprising a sequence encoded by the nucleic acid molecule and consisting of e.g., 85, 299, 467 or 812 amino acids; fragments of hyperimmune serum-reactive antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 INAIINSKSVSDAINRVSAIREVVSANEKMLQQQEQDKAAVEQKQQENQAAINTVAANQE 180
                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid molecule encoding a hyperimmune serum reactive antigen, useful for the manufacture of a vaccine against Streptococcus agalactiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28

The nucleotide sequences encode polypeptides of Sagalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, fatty acid and phospholipid metabolism, nucleotide metabolism, including purines, pyrimidines and/or nucleosides, regulatory functions, replication, transcription, translation, protein transport, adaptation to atypical conditions, sensitivity to medicitines and/or analogues, incrtions related to transposons, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery. (I) are useful for the detection and/or amplification of nucleic acids Pharmaceutical composition comprising (I) or (II) are useful for treatment of a bacterial S. agalactiae infection. Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 30, Application US/10383930

Sequence 30, Deposition US/10383930

Deposition No. US20040127400A1

GENERAL INFORMATION:

APPLICANT: Taubman, Martin A

TITLE OF INVENTION: Immunogenicity of Glucan Binding Protein

TITLE REFERENCE: 25669-018

CURRENT APPLICATION NUMBER: US/10/383,930

CURRENT APPLICATION NUMBER: 60/402,483

PRIOR PILING DATE: 2002-08-08

PRIOR FILING DATE: 2002-08-08

PRIOR FILING DATE: 2002-03-07

NUMBER OF SEQ ID NOS: 41

SOFTWARE: Patentin version 3.2

Sequence 32, Application WS20050031633A1

Sellication No. US20050031633A1

GENERAL INFORMATION:

APPLICANT: Smith, Daniel J.

APPLICANT: Taubman, Martin A.

TITLE OF INVENTION: Glucan Binding Protein and Glycosyltransferase Immunogens

FILE REFERENCE: 2569-020

CURRENT APPLICATION NUMBER: US/10/797,821

CURRENT PILING DATE: 2004-03-09

PRIOR APPLICATION NUMBER: 60/403,209

PRIOR PILING DATE: 2002-03-07

PRIOR FILING DATE: 2002-08-08

PRIOR PLING DATE: 1999-04-12

PRIOR PPLING DATE: 1999-04-13

PRIOR PLING DATE: 1998-04-13
